Computer virus mcq with answers pdf full

It is hard to detect. NOTE: Phishing: It is an attempt to target confidential and sensitive information including usernames and passwords, credit card details, bank account information and other personal information by falsely mimicking or masquerading a trustworthy entity. Hence, the assertion is correct. These viruses attach themselves to the of this part of the disk and activate when the user attempts to start up. Malware includes various viruses, spy-wares, adware, Trojan horses, worms etc. Worm- A worm is malicious software which similar to that of a computer virus is a self-replicating program, however, in the case of worms, it automatically executes itself. Hence, it can be concluded that a worm is a virus type that is capable of transferring from one computer to another without any user interaction. 3. An acquired card is swiped, and a touchpad allows the user to enter a security code. View Solution play_arrow The viruses that change their appearance to avoid detection are called___. Spamming means posting or emailing unsolicited advertising messages to a wide audience. The goal is to steal sensitive data like credit card and login information or to install malware on the victim's machine. It is an initial practice and comes under cybercrime. Hence, it can be concluded from the given points that in the context of ICT, spamming is posting or e-mailing unsolicited advertising messages to a wide audience. View Solution play_arrow A computer virus can ___. Phishing Phishing is a cybercrime in which a target or targets are contacted by email, telephone, or text message by someone posing as a legitimate institution to lure individuals into providing sensitive data such as personally identifiable information, banking, and credit card details and passwords. Users need to follow it carefully. Spyware is generally not self-proliferating, i.e. they do not spread from one infected system to another. A Firewall is a system security framework that screens and controls approaching and active system traffic dependent on certain security rules. Spoofing can apply to emails, phone calls, and websites, or can be more technical, such as a computer spoofing an IP address, Address Resolution Protocol (A R P), or Domain Name System (D N S) server. Malware: It is short for ‘malicious software’. This confidential information may include sensitive information including usernames and passwords, credit card details, bank account information and other personal information. A keylogger program does not require physical access to the user's computer. Types of Malware “Spyware” is a generic term used to describe software that is implicitly designed to spy on or collect data about Internet search habits or other private information without the user's consent. Therefore, the extra browser window of commercials that open automatically on browsing web pages is called Pop-up. Almost all the rootkits are designed to hide their existence. Disk Killer, Stone Virus Program or File Virus It infects executable files such as EXE, BIN, COM, etc. View Solution play_arrow Which of the following is used to detect and remove virus from a computer? View Solution play_arrow To which type of virus does WM-concept. Card users are warned to keep their cards in their sight at all times and to cover the pin pad when inputting security codes at ATMs. India’s #1 Learning Platform Start Complete Exam Preparation Daily Live MasterClasses Practice Question Bank Mock Tests & Quizzes Get Started for Free Download App Trusted by 2,74,49,075+ Students Spamming is posting or e-mailing unsolicited advertising messages to a wide audienceSpamming is sending lines of nonsensical garbage in a chat ConversationSpamming is posting a message that contains a graphic description of something offensiveSpamming is an attempt to acquire sensitive information of Malicious reasons, by masquerading as a trustworthy entity Option 1 : Spamming is posting or e-mailing unsolicited advertising messages to a wide audience ICT provides information and communication technology for people to connect and learn. A pop-up window is a type of window that opens without the user selecting "New Window" from a program's File menu. Pop-up windows are often generated by websites that include pop-up advertisements. Hoax: It invades the system and deletes an important file when a program is run to correct the harming system. View Solution play_arrow Which of the following antivirus programs has high detection rate? Hackers make use of Trojan horses to steal a user’s password information, destroy data or programs on the hard disk. Trojan Horse: A Trojan Horse program has the appearance of having a useful and desired function. It is a type of malware. So it is possible to have privacy without security but we can have security without privacy. Assertion: Data protection can be measured through data security and privacy. In the same way, malicious attackers employ the use of these packet sniffing tools to capture data packets in a network. 2. True Trojan horses are not technically viruses, since they do not replicate; however, many viruses and worms use Trojan horse tactics to initially infiltrate a system. The term can typically be used for other media like in internet forums, instant messaging, and mobile text messaging, social networking, television advertising, etc. Virus A computer virus is a type of malicious code or program written to alter the way a computer operates and is designed to spread from one computer to another. Reason: Different sites have their own privacy policies and security system. Word and Nuclear Email Virus This type of viruses is activated and spread in systems when an email attachment is opened. India’s #1 Learning Platform Start Complete Exam Preparation Daily Live MasterClasses Practice Question Bank Mock Tests & Quizzes Get Started for Free Download App Trusted by 2,74,49,075+ Students VirusMalwareSweeperAdware Malware: Software designed to perform an unwanted illegal act via the computer network. It is capable of executing secretly when the host program/file is activated. A) Trojans B) Viruses C) Worm D) Adware E) Bots Option A Explanation: Generally, you receive Trojan horses though emails, infected webpages, instant message, or downloading services like games, movies, and apps. Invader and Tequila Macro Virus It infects a Microsoft Word or similar application and causes a sequence of actions to be performed automatically when the application is started. It neither replicates itself or copies itself, but compromises the security of the computer. etc. View Solution play_arrow Which type of virus infects .SCR, .SYS files? Key Points Malware is any software intentionally designed to cause damage to a computer, server, client, or computer network. The explosive growth of the Internet has brought forth a proliferation of advertising messages spread online. India’s #1 Learning Platform Start Complete Exam Preparation Daily Live MasterClasses Practice Question Bank Mock Tests & Quizzes Get Started for Free Download App Trusted by 2,74,49,075+ Students Web page: A web page is a simple document displayable by a browser. ILOVEYOU, Melissa NOTE: An operating system (OS) is a collection of programs that acts as an interface between a user of a computer and the computer hardware. View Solution play_arrow What do you call files which have unknown virus that is not listed in its database? SniffingSpoofingBack DoorsWar Dialing The process through which an illegitimate website pretends to be a specific legitimate website is known as Spoofing. A really important development under this Act is that it requires mandatory conformance to accessibility standards and recognizes that reasonable accommodation and universal design are critical for facilitating access equitably and creating an accessible framework for India going forward. A wide variety of malware types exist, including computer viruses, worms, Trojan horses, ransomware, spyware, adware, rogue software, wiper, and scareware. Antivirus software is a set of programs designed to prevent, detect and remove malwares on computing devices as well as protect against a wide variety of other threats. Trojan horses- Unlike a computer virus or a worm – the Trojan horse is a non-replicating program that appears legitimate. Pharming is a scamming practice in which malicious code is installed on a personal computer or server, misdirecting users to fraudulent Web sites without their knowledge or consent. Spoofing can apply to emails, phone calls, and websites, or can be more technical, such as a computer spoofing an IP address, Address Resolution Protocol (ARP), or Domain Name System (DNS) server. Phishing is the fraudulent attempt to obtain sensitive information or data, such as usernames, passwords, and credit card details, or other sensitive details, by impersonating oneself as a trustworthy entity in digital communication. NOTE: Phishing: This kind of activity is performed by falsely mimicking or masquerading a trustworthy entity in an attempt to scam the recipient to divulge private information regarding themselves. Worm: Copy themselves from system to system, rather than infiltrating legitimate files. View Solution play_arrow Multiple Choice Questions on Computer Viruses for IBPS PO, NICL AO, Dena Bank PO PGDBF, NIACL Assistant/AO, BoB PO, IBPS Clerk, BOI, and other competitive exams. The altering helps the hacker to take full control of the system and the hacker acts as the system administrator on the victim’s system. India’s #1 Learning Platform Start Complete Exam Preparation Daily Live MasterClasses Practice Question Bank Mock Tests & Quizzes Get Started for Free Download App Trusted by 2,74,49,075+ Students Operating SystemComputer VirusFirewallAnti-virus Option 2 : Computer Virus Malware is short for ‘malicious software’. It has an essential role to play in the education sector. Sniffing: Sniffing is the process of monitoring and capturing all data packets that are passing through a computer network using packet sniffers. If a user does not take any step for the security and privacy of data, it could be at stake on the Internet. Hence, the reason is also correct. A web page can embed a variety of different types of resources such as style information — controlling a page's look-and-feel. View Solution play_arrow Virus in computers is related to ___. Pop-ups open automatically while browsing web pages. A computer virus is a self-replicating program containing code that explicitly copies itself into other executable codes or programs. Hence, it can be concluded from the given points that spyware is a software that aims to gather information about a person without his/her knowledge and that may send such information to another entity. Types of Malware: Worm: It is a self-replicating program that uses a network to send copies of itself to other nodes and does so without any user intervention. It is used by companies to market their products, sometimes they are also used for dubious purposes to scam innocent people. View Solution play_arrow Which of the following actions is performed by an antivirus software on a virus infected file? The purpose of an operating system is to provide an environment in which a user may execute the programs. Which of the following is a type of program that either pretends to have, or is described as having, a set of useful or desirable features but actually contains damaging code. Spam Spam is any kind of unwanted, unsolicited digital communication, often an email, that gets sent out in bulk. Spam is a huge waste of time and resources. It is usually done through email. These hackers have devised numerous ways to steal important data which is then put to misuse. This malware exists in many forms. The email advises him to click on the provided link and sign into his online banking account to prevent this from happening, which he does. A belong? These days most of our important transactions happen over the internet which leads to exposing our personal data to cybercriminals or hackers. Pharming has been called "phishing without a lure." India’s #1 Learning Platform Start Complete Exam Preparation Daily Live MasterClasses Practice Question Bank Mock Tests & Quizzes Get Started for Free Download App Trusted by 2,74,49,075+ Students Both A and R are correct and R is the correct explanation of ABoth A and R are correct but R is NOT the correct explanation of AA is correct but R is not correctA is not correct but R is correct Option 1 : Both A and R are correct and R is the correct explanation of A Privacy: It helps to block websites, internet browsers, cable companies, and internet service providers from tracking your information and your browser history. Security: It helps protect you from other people accessing your personal information and other data. Online blackmail: It is the act of threatening to share information about an individual (including images or video) to the public, their friends, or family online unless a demand is met. View Solution play_arrow Which of the following is an example of a boot virus? Identifying fraudsters copying vital information from credit cardsMultiple transactions by one credit cardConversion of a debit card into credit cardExcessive charge for online services Option 1 : Identifying fraudsters copying vital information from credit cards Skimming" in e-banking refers to Identifying fraudsters copying vital information from credit cards Skimming is an illegal practice used by identity thieves to capture credit card information from a cardholder surreptitiously. A pop-up is a graphical user interface (GUI) display area, usually a small window, that suddenly appears ("pops up") in the foreground of the visual interface. A are examples of ___. View Solution play_arrow The antivirus softwares that are installed in RAM and continue to operate in the background while other software applications are running are ___. Sweeper: It is a programme that deletes all the data from a computer. Types of Viruses Virus Type What it does Example Boot Sector Virus It infects boot sectors on hard /floppy Disks and other bootable devices. Keyloggers: It is a hardware or software device which monitors every keystroke, screenshots, chats etc typed on the computer. Spamming: In general, the word spam is commonly used to describe unsolicited e-mails that are sent in bulk. Malware' is a general term used to refer to a variety of intrusive software. The incident given in the statement 'Ankur receives an email informing him that his credit card is going to be cancelled. If the attacker is particularly skilled" he can create a custom Trojan that mimics the appearance of a program that is unique to that particular computer such as a company database program. Therefore, option 4 is correct in regards to Trojan Horse, It is a software program that appears legitimate but contains a hidden function that causes damage. Packet Sniffers are used by network administrators to keep track of data traffic passing through their network. But privacy is sometimes difficult to deal with. Spoofing: Spoofing is the act of disguising a communication from an unknown source as being from a known, trusted source. Worms spread over a network and are capable of launching a cumbersome and destructive attack within a short period. A Trojan horse: It is a type of malware that often disguised as a legitimate software It is used by cyber thieves and hackers to access user systems. If someone has physical access to your computer, he can simply copy a Trojan to your hard disk. Some machines act like point-of-sale technology. So, Both A and R are correct and R is the correct explanation of A. India’s #1 Learning Platform Start Complete Exam Preparation Daily Live MasterClasses Practice Question Bank Mock Tests & Quizzes Get Started for Free Download App Trusted by 2,74,49,075+ Students SpammingPhishingVirus SigningScanning The correct solution is "Phishing". They can have even more direct effects, like stealing passwords and credit card information. Can be classified on the basis of execution: Virus: Infects other programs by modifying them to include a possibly evolved copy of itself. Sunday and Cascade Multipartite Virus This is hybrid of a program and boot sector virus as they infect both boot sectors and executable files. The best way to stay away from Trojans is by making sure you install software from trusted sources. Phishing is acquiring the personal and sensitive information of a person through official-looking emails. Phishing attacks are the practice of sending fraudulent communications that appear to come from a reputable source. Spyware: Invades a computer and monitors a user’s activities without consent. Once they're in, cybercriminals can use a backdoor to steal personal and financial data, install additional malware, and hijack devices. These are called network protocol analyzers. Users of online banking and e-commerce websites are more prone to this attack. Once it activated on the device, it enables hackers and cybercriminals to spy on the device. They usually use e-mail or text messages to divert the person and still his/her personal details. To do this, malicious hackers have created special wrapper or binder programs with names such as Saran Wrap, silk rope which can package any Trojan inside another program thereby reducing the likelihood that someone would discover it. Since most users won't suspect that a program from a large, well-known publisher would contain a Trojan, the victim is likely to run the linked program containing the Trojan. Once someone has written a Trojan, the next step is to spread it by copying it onto a victim's computer, posting it on a website for others to download, sending it as a file attachment via email. Since few people would knowingly run a malicious program, Trojan must disguise themselves as other programs that the victim believes to be harmless (such as games, utilities, or popular applications). This is not all, besides disguising themselves as harmless programs, Trojan horses can also disguise themselves into a legitimate program, such as Adobe Photoshop or Microsoft Excel. Virus: The term ‘Virus’ stands for “Vital Information Resources under Siege”. Phishing: It refers to online theft of identity in which an individual’s confidential information is obtained. Hackers often use war dialing software, sometimes called "war dialers" or "demon dialers," to look for unprotected modems. The scammers use phishing viruses to access the data from the user's device. Rootkit- A rootkit is malicious software that alters the regular functionality of an OS on a computer in a stealthy manner. The different types of Computer viruses are Memory-Resident Virus, Program File Virus, Boot Sector Virus. Spamming is the use of messaging systems to send an unsolicited message (spam) to large numbers of recipients for the purpose of commercial advertising, for the purpose of non-commercial proselytizing, or for any prohibited purpose (especially the fraudulent purpose of phishing). It can impact in a number of ways like deleting data, blocking data, modifying data, copying data, disrupting computer performances, etc. A week later, Ankur notices that Rs. 10,000 has been withdrawn from his bank account.' This is a clear example of a phishing scam. View Solution play_arrow Acid rain, Trojan and Amoeba. 3. War Dialing: War dialing refers to the use of various kinds of technology to automatically dial many phone numbers, usually in order to find weak spots in an IT security architecture. A computer virus is a malware attached to another program (such as a document), which can replicate and spread after an initial execution on a target system where human interaction is required. India’s #1 Learning Platform Start Complete Exam Preparation Daily Live MasterClasses Practice Question Bank Mock Tests & Quizzes Get Started for Free Download App Trusted by 2,74,49,075+ Students Protect intellectual propertyImprove the usability of websitesMake all websites easier to use for visually impaired peopleImprove access to services for disabled people in both the physical and the virtual worlds Option 4 : Improve access to services for disabled people in both the physical and the virtual worlds Accessibility legislation is the legislation intended to assist users of websites with disabilities including visual disability. After gaining the trust, it secretly performs malicious and illicit activities when executed. Hence, it is clear that a virus is a computer program that spreads by inserting copies of itself into other executable codes or documents. It is the use of electronic messaging systems like emails and other digital delivery systems to send unwanted bulk messaged indiscriminately. View Solution play_arrow Which of the following areas does an antivirus check for a virus? Spoofing can be used to gain access to a target’s personal information, spread malware through infected links or attachments, bypass network access controls, or redistribute traffic to conduct a denial-of-service attack. The Internet service providers (ISP) carry and store the data. It covers all grounds like collection, storage, management, and sharing of data. View Solution play_arrow If your file is infected by a virus and you are sending that infected file to your friend through e-mail, what happens to your friend's computer? Many viruses are harmful and can destroy data, slow down system resources, and log keystrokes. Trojan: It is a malware that disguises itself as legitimate or useful software. The new legislation recognizes that accessibility is critical for inclusion and that it is a cross-sectoral issue to be implemented by different stakeholders across different government departments and ministries and agencies. Ads that appear behind open windows are also called "pop-under" ads. India’s #1 Learning Platform Start Complete Exam Preparation Daily Live MasterClasses Practice Question Bank Mock Tests & Quizzes Get Started for Free Download App Trusted by 2,74,49,075+ Students WormTrojanKey LoggingBoot Sector Virus Malicious software or malware are programs intentionally designed to perform some unauthorized - often harmful or undesirable actions. Trojan: Impairs the security of a system and is used to create back-doors on computers belonging to a secure network. Boot Sector Virus: It is a type of virus that infects the boot record on hard disks. A virus: It is a type of malicious code or program written to alter the way a computer operates and is designed to spread from one computer to another. View Solution play_arrow In which of the following files can viruses be sent as email attachments? A computer virus behaves in a way similar to a biological virus. India’s #1 Learning Platform Start Complete Exam Preparation Daily Live MasterClasses Practice Question Bank Mock Tests & Quizzes Get Started for Free Download App Trusted by 2,74,49,075+ Students It could be a dangerous threat to online data, money, and property. Fraudsters often use a device called a skimmer that can be installed at gas pumps or ATM machines to collect card data. Some of the computer viruses are, Wannacry, Cryptolocker, Zeus, etc. It will gather information on users’ habits such as browsed websites, accessed applications and downloaded programs and send them to a third party. All hard disks contain a small program in the boot record that is run when the computer starts up. 2. Worm: It is also a self-replicating computer program, but unlike a virus, it is self-contained and does not need to attach itself to another executable program. It deals with the proper handling of data and data protection regulation. Online advertising, also known as online marketing, Internet advertising, digital advertising, or web advertising, is a form of marketing and advertising which uses the Internet to deliver promotional marketing messages to consumers. Malware can gain remote access to any computer and send that from that system to a third party without the user’s knowledge. View Solution play_arrow Which is the product of Symantec corporation? India’s #1 Learning Platform Start Complete Exam Preparation Daily Live MasterClasses Practice Question Bank Mock Tests & Quizzes Get Started for Free Download App Trusted by 2,74,49,075+ Students A phishing scamA Trojan horseOnline blackmailA virus Option 1 : A phishing scam A phishing scam: Phishing is a trick used by scammers to know one's personal information. India’s #1 Learning Platform Start Complete Exam Preparation Daily Live MasterClasses Practice Question Bank Mock Tests & Quizzes Get Started for Free Download App Trusted by 2,74,49,075+ Students A software programme which provides functions within Microsoft WordA software programme designed to detect computer virusAn application software designed to enhance the quality of an information systemA software programme that appears legitimate but contain hidden function that cause damage Option 4 : A software programme that appears legitimate but contain hidden function that cause damage A Trojan horse is a hidden piece of code. Spoofing is the act of disguising a communication from an unknown source as being from a known, trusted source. View Solution play_arrow Which kind of virus attaches itself to the antivirus program? Back Doors In the world of cybersecurity, a backdoor refers to any method by which authorized and unauthorized users are able to get around normal security measures and gain high-level user access (aka root access) on a computer system, network, or software application. Privacy is safeguarding user identity, while security is the safeguard of data. Option 1 : Software that aims to gather information about a person without his/her knowledge, and that may send such information to another entity. The information gathered may cover files accessed on the computer, a user’s online activities, or even the user’s keystrokes. View Solution play_arrow Which type of virus usually enters a computer through e-mail? View Solution play_arrow Which of the following software?s is not infected by a virus? 1. Security protects unauthorized access of data over the internet. Spoofing is often the way a bad actor gains access in order to execute a larger cyber attack such as an advanced persistent threat or a man-in-the-middle attack. Different types of malicious software are: Computer virus- A computer virus is malicious software that self-replicates and attaches itself to other files/programs. Viruses enter a system secretly where the Trojan horse enters by deceiving a user. A user allows or invites a Trojan into the system, believing in it, but actually, Trojan horse contains some malicious code to perform some malicious activity. Before a Trojan can attack, it must find a way to entice the victim to copy, download, and run it. View Solution play_arrow Which of the following viruses will damage documents? Spyware- Spyware secretly records information about a user and forwards it to third parties. It neither replicates nor copies itself, but causes damage or compromises the security of the computer.
